課程名稱:微分方程 I (Differential Equations I)

課號/班別: MA0001

上課時間 (Time): Monday 9:10-12:00

學分: 3

授課教師: 陳建隆 (Jann-Long Chern)

授課內容:

The objects of this course are the followin:

(1) Study the basic mathematical models coming from the

fields of Biology, data science and physics, etc.

(2) Learn the fundamental theorems of ODE

(3) Investigate the principles of stability

(4) Further topic of the related Dynamical Systems and

Patterns

In this course, we study the following contents:

(1) The Basic mathematical models coming from the areas of

Biology, physics, data science, image processing, etc.

(2) Differential equations of the first order, linear

systems of ordinary differential equations:

(3) Linear System with constant and periodic coefficients,

Floquet theory;

(4) Phase plane analysis for 2-D autonomous system;

(5) Stability of Nonlinear Systems, Elementary qualitative

properties of nonlinear differential equations;

(6) Method of Lyapunov Functions;

(7) Poincare-Bendixson Theorem and Two Dynamical Systems.

(8) Related applications of ODEs.

參考書(References):

(1) Sze-Bi Hsu, Ordinary Differential Equations with
Applications: Second Edition

(2) J. D. Murray, Mathematical Biology Vol I-II

(3) Related Notes
